November 2025

2024 Christmas Bird Count, New Brunswick

The 2024 Christmas Bird Count (CBC) season, operating from December 14 2024 to January 5 2025, was the 78th year in which at least one CBC was undertaken in New Brunswick. 48 count circles were surveyed around the province, with all 48 posting their results to the international database operated by Birds Canada and Audubon. New Brunswick CBCs cover the Bay of Fundy plus 550 km of the North Atlantic coastline as well as southern parts of the hemisphere's boreal forest and the province's urban areas. Being a small province with usually the third or fourth most count areas, New Brunswick has the most comprehensive coverage of any Canadian province.

December 2024 in New Brunswick was characterized by highly variable "freeze-thaw" conditions, including significant snowfall events mixed with periods of mild temperatures and heavy rain, particularly mid-month. In the north, a "wet winter whirlwind" with heavy rain (over 25mm in some areas), strong winds (up to 70 km/h near the coast), and isolated freezing rain occurred on December 11-12. A major snowfall event hit much of the province just before Christmas, with areas along the Fundy coast receiving the most snow, in some cases up to 40 cm. Fredericton and Moncton received 10-15 cm. [Note that this paragraph on weather was obtained by an AI search for "December 2024 weather in New Brunswick".]

In all, 158,242 birds from 133 species (plus 5 Count Period species) were reported. As shown in the table, it is the second highest number of birds in the last decade but six of the previous nine years had greater species diversity, including 140 species in 2022.

	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
Counts	47	50	51	51	50	50	50	49	48	48
Species	137	129	134	130	133	139	135	140	139	133
Individuals	123519	140131	131539	129506	132576	163411	153605	136194	126369	158211

Half of the birds (just over 80,000 individuals) were from just four species that broke the 10,000 mark: European Starling, Herring Gull, Black-capped Chickadee, and American Crow.

Perfect attendance in all 48 count areas was achieved by just by two species this year – Black-capped Chickadee and Blue Jay. Hairy Woodpecker and Red-breasted Nuthatch at 47 and Common Raven at 46 were close.

But we get out and look because there are always summer lingerers, hoped-for northern winter visitors that we have not seen since the last CBC and unexpected species.

The summer lingerers this year included six Belted Kingfishers in four areas, three areas with one Baltimore Oriole each, four Common Yellowthroat from three areas as well as five areas with a single Northern Mockingbird.

Expected winter visitors included 161 Bohemian Waxwings from seven areas, Glaucous and Iceland Gulls from 11 and 22 count areas respectively, three Snowy Owls from three separate areas and 2237 Snow Buntings from 31 areas. Also, 249 Barrow's Goldeneye, never abundant or widespread, were seen on 13 counts.

Northern Cardinals are not a surprise on a Christmas Count almost anywhere in the province now. This year 583 of them were found on 33 different counts. Mourning Doves which preceded cardinals into the province by a few years are even more widespread with almost 4500 of them showing up in 45 different areas. Turkey Vultures arrived later than either of the above two species; 48 were reported from 3 count areas.

All of the anticipated “northern finches” were observed with numbers and locations varying widely but, as usual, the boreal forest area of the province uncovered the most. Year-round residents that are often associated with Christmas Bird Counts included 27 Boreal Chickadees from just seven areas and 81 Canada Jays being more abundant and more widespread in 19 areas.

Some species were seen on only a single count; Canvasback (1 at Sackville), Northern Gannet (5 at St Martins), Golden Eagle (1 at Riverside-Albert), Killdeer (1 at Riverside-Albert), Greater Yellowlegs (1 at St Martins), Thick-billed Murre (4 at Blacks Harbour), Lesser Black-backed Gull (2 at Moncton), Eastern Bluebird (2 at Sackville), Brown Thrasher (1 at Woodstock), American Pipit (8 at St Martins), Lincoln’s Sparrow (1 at Memramcook-Hillsborough), and Brown-headed Cowbird (1 at Salisbury).

No additional species were added during the Count Week, but five were added during Count Period: Northern Shoveler (Miramichi and Restigouche), Northern Hawk Owl (Tracadie-Sheila), Yellow-throated Warbler (St Martins), Clay-colored Sparrow (Quispamsis-Hampton) and Dickcissel (Memramcook-Hillsborough).

For the fifth year in a row, Tufted Titmouse have shown up in at least one of the St Stephen, Saint Andrews or Eastport-Campobello count areas in the southwest corner of the province. In 2024, a total of 12 titmice were found – 8 in St Stephen and 4 in Saint Andrews. In 2023, there were 11 titmice – 5 in Saint Andrews, 4 on Campobello Island and 2 in St Stephen. This may be the next species to “invade” New Brunswick from the southwest as there are count areas in Maine that report more than 200 individuals and one count in Massachusetts reported 1791 in 2024.

For the first time, current-year data was added to a database being developed to cover all of New Brunswick’s historical CBC data. The Audubon files were uploaded to the new database and then used to develop the attached Excel sheets. It’s becoming much easier to search back into New Brunswick’s CBC history and make use of all the acquired data. And, as for every year since 1968, Nature NB will publish the 2024 CBC results from around the province – probably just prior to the 2025 CBC.

Once again, New Brunswick’s Christmas Bird Count attracted about a thousand human participants as well. Some count areas had 60 or 80 participants, many at feeders, while others tried to survey the same-sized area with just two participants. Anecdotally, I know that many observers have participated in CBCs every year for decades. More precisely, I know from the published records, that we now have 22 count areas with 50 or more years of data. Many other areas are close to that. Half-century environmental data sets are not common!

Many thanks to all compilers and participants.

Provincial Compiler:
